Professional Summary

Backend Developer with hands-on experience building scalable REST APIs using Spring Boot, Hibernate, and PostgreSQL, along with Python-based AI services using FastAPI. Experienced in end-to-end deployment on AWS (EC2, Elastic IP, RDS) using Docker. Developed full-stack applications that integrate the React.js front end with secure JWT-based authentication and reprocessed augmented generation (RAG) pipelines. Passionate about building high-performance, distributed backend systems and writing clean, maintainable code.

Technical Skills

Languages: Java, Python, C++
Backend: Spring Boot, Spring MVC, Spring Security, Hibernate (JPA), JDBC, FastAPI, RESTful APIs, Microservices
AI / RAG: LangChain, RAG Pipelines, Vector Embeddings, pgvector, Gemini API
Frontend: React.js, Vite, Tailwind CSS, HTML, CSS, JavaScript
Databases: PostgreSQL, MySQL, MongoDB
Cloud & DevOps: AWS (EC2, Elastic IP, RDS), Docker, Nginx, Git, GitHub, Maven
Testing & Tools: JUnit, Mockito, Postman, IntelliJ IDEA, VS Code
Core Concepts: OOP, Data Structures & Algorithms, Database Optimization, JWT

Education

Amity University, Jharkhand — **Ranchi, India**
B.Tech – Computer Science & Engineering — CGPA: 8.7 / 10 — *2023 – 2027*

Elite Public School — **Daltonganj, India**
Senior Secondary (Class 12), CBSE Board — *2022 – 2023*

Experience

Infosys Springboard — **Remote**
Virtual Internship — SwipeX: AI-Powered Job Discovery Platform — *Aug 2026 – Present*

- Selected for an 8-week virtual internship to architect and build **SwipeX**, a swipe-based intelligent job discovery platform, spanning React.js, Python (Django REST Framework / FastAPI), and PostgreSQL.
- Implementing JWT and OAuth2-based authentication with role-based access control across job seeker, recruiter, and admin roles.
- Designing the database schema and core backend architecture for a swipe-driven job discovery engine, AI-based resume/ATS scoring, and personalized recommendation system.

Projects

DocuMind – RAG-Based Document Chat Assistant [Live] [GitHub]
Spring Boot, FastAPI, React.js (Vite, Tailwind), PostgreSQL, pgvector, Gemini API, AWS

- Built a ChatGPT-style document chat assistant enabling users to upload files and query them in natural language via a RAG pipeline.
- Designed a dual-service backend: a **Spring Boot** service for auth, document management, and orchestration, and a **FastAPI** microservice for embedding generation and retrieval.
- Implemented semantic search using **pgvector** on PostgreSQL, storing and querying embeddings generated via Gemini's `gemini-embedding-001` model.
- Integrated `gemini-3.5-flash` for context-aware chat responses, grounding answers in retrieved document chunks to minimize hallucination.
- Deploying the full stack to **AWS EC2** with **RDS PostgreSQL** and **Docker**, following the same production pipeline used for HireMind.

HireMind – Full-Stack Job Platform & AI Resume Analyzer [Live] [GitHub]
React.js, Spring Boot, Spring Security, Hibernate, PostgreSQL, JWT, AWS (EC2, RDS, Docker)

- Architected a full-stack job platform enabling users to browse and apply to job listings, and access curated learning resources with topic-wise practice sheets.
- Built an **ATS Resume Analyzer** that scores resumes against a target Job Description, generating an overall match score broken down into project, experience, and skills sub-scores.
- Engineered a skill-gap engine that identifies missing skills from the JD and generates a personalized learning roadmap to close the gap.
- Extended the analyzer to auto-generate likely **interview questions** based on the JD and the candidate's resume content.
- Secured **15+ REST API endpoints** with Spring Security and JWT (plus Google OAuth2), implementing stateless authentication across all user roles.
- Deployed the full stack to **AWS EC2** with an **Elastic IP** and **RDS PostgreSQL**, containerized via **Docker Compose** behind an Nginx reverse proxy with Cloudflare and Let's Encrypt SSL.

Achievements & Certifications

- **Oracle Certification – Databases for Developers: Foundations:** Deepened expertise in relational databases, DBMS concepts, efficient SQL query writing, data management, and leveraging database features for application development.
- **Google Cloud – Troubleshooting Certificate (Google Code Vipassana):** Hands-on certification in diagnosing and resolving cloud infrastructure and application issues.
